

Conversation Analysis

Tuesday March 16th, 2010

1 p.m. – 4 p.m.

Teacher: Johannes Wagner, University of Southern Denmark

This course will introduce basic concepts in conversation analysis. The starting point will be a short introduction to Ethnomethodology and its approach to social order, followed by a sequential analysis of a short data segment. Issues as transcription and transcription editors, aspects of sequentiality, repair, and others will be discussed on the basis of the example. The last part of the afternoon will present available data bases for CA, especially the new Danish CA bank.

At the end of the afternoon, the participants should have an understanding of the research questions which conversation analytic methodology is able to investigate.
